

In any information system, the bottom line comes down to accurate data and how easily the required data is extracted and presented. Reports are critical in properly analyzing and managing the production process. The FullMetrics Reports module provides the user with the proper tools to review critical information.

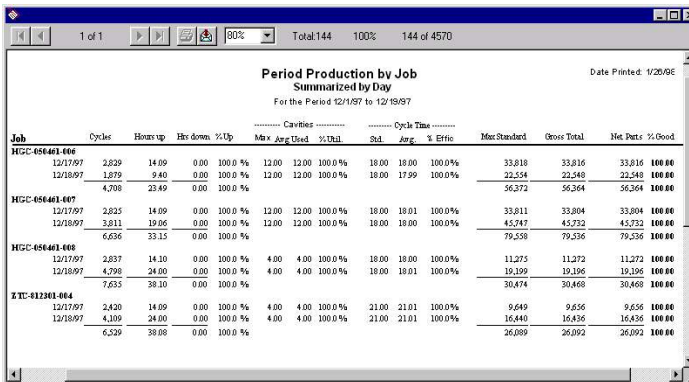

Key Features

- Over 60 standard reports. Including reports for downtime, scrap, production, efficiencies, maintenance performed and upcoming maintenance requirements, upcoming material requirements, asset utilization, list reports of all resources and defined event codes, and many others.
- Each report is briefly described so that you know exactly what the report will give you. No need to guess which is the right report to run.
- Numerous filters allow you to extract only the information you want. Use filters to get a snap shot of a particular period of time or information regarding a particular machine or job.
- Preview allows any report to be viewed on the screen, then print if desired. No need to print every report just to view information.
- All reports can be exported to many different file formats: character or comma-separated values (.csv), Excel™ (.xls), Word™ (.doc), Crystal Reports™ (.rpt), data interchange format (.dif), HTML, Lotus™, Rich Text Format (.rtf), tab-separated, and others.

Custom ReportWriter Package

FullMetrics offers SEAGATE'S CRYSTAL REPORTS™ as our custom report writer creator. This is an industry standard report writing tool that offers outstanding flexibility and an easy-to-use approach.
